

LANUX — Web Colour Theme

LANUX uses a restrained blue-grey technical colour system: a near-black dark theme by default, a clean soft-white light theme, and a single locked accent family that ties both together. Every colour on this page and the two that follow is taken directly from the live LANUX stylesheet — nothing here is a new design.

Primary Strong
#ABBED3

Primary
#B0BFD1

Primary Tint
#B9C3D0

Primary Pale
#CFDEEA

VISUAL DIRECTION

Minimal & premium — no clutter, generous spacing, restrained detail.

Near-black dark theme — the primary, default experience.

Clean light theme — soft blue-white, not stark white.

One accent family — every accent is a shade of the same locked blue-grey.

No neon, no clutter — no cyberpunk glow, no unrelated colours.

Technical & sophisticated — quiet confidence over decoration.

DARK THEME

Primary button

Success state

Muted nav link → hover accent

Primary text on #0B0E14

LIGHT THEME

Primary button

Success state

Muted nav link → hover accent

Primary text on #F6F9FD

THE FOUR LOCKED LANUX COLOURS, IN SEQUENCE

Dark Theme — default (:root)

Extracted from the LANUX stylesheet's :root token block.

COLOUR	HEX	PURPOSE
 Main background	#0B0E14	Base page background (--bg)
 Secondary background	#0E1219	Alternate section background (--bg-alt)
 Surface / card	#131824	Cards, inputs, secondary buttons (--surface)
 Elevated surface	#1A2130	Hover state for service/work cards (--surface-elevated)
 Primary text	#EDEF F3	Headings and body copy (--text)
 Muted text	#8B93A7	Nav links, labels, secondary copy (--text-muted)
 Border	#232B3B	Default hairline border / nav border-bottom (--border)
 Border — strong	#2E374A	Input & secondary-button borders (--border-strong)
 Primary accent	#B0BFD1	Accent colour, button gradient start (--primary)
 Accent — strong	#ABBED3	Button gradient end, brand mark (--primary-strong)
 Accent — hover / active	#CBD5E0	Link underline, focus ring, icon accent (--icon-accent, 55% primary / 45% text)
 On-primary text	#10141C	Text sitting on the primary button fill (--on-primary)
 Success	#4CAF7D	Form success message (16% fill, 40% border)
 Error	#E4685D	Form validation & error message

Buttons — primary: gradient --primary → --primary-strong, text --on-primary. Secondary: transparent fill, --border-strong border, hover fills with --surface and border becomes --primary.

Inputs — background --surface, border --border-strong, focus border --icon-accent with a 30%-opacity primary ring.

Links — --text-muted at rest, --text on hover, underline in --icon-accent.

Light Theme — [data-theme="light"]

Extracted from the LANUX stylesheet's [data-theme="light"] override block.

COLOUR	HEX	PURPOSE
 Main background	#F6F9FD	Base page background (--bg)
 Secondary background	#EEF4FB	Alternate section background (--bg-alt)
 Surface / card	#FFFFFF	Cards, inputs, secondary buttons (--surface)
 Elevated surface	#FFFFFF	Hover state for service/work cards (--surface-elevated)
 Primary text	#12161F	Headings and body copy (--text)
 Muted text	#5B6478	Nav links, labels, secondary copy (--text-muted)
 Border	#E2E9F3	Default hairline border / nav border-bottom (--border)
 Border — strong	#CBD9EC	Input & secondary-button borders (--border-strong)
 Primary accent	#B0BFD1	Accent colour, button gradient start (--primary — unchanged from dark)
 Accent — strong	#ABBED3	Button gradient end, brand mark (--primary-strong — unchanged from dark)
 Accent — hover / active	#697381	Link underline, focus ring, icon accent (--icon-accent, 55% primary / 45% text)
 On-primary text	#12161F	Text sitting on the primary button fill (--on-primary)
 Success	#4CAF7D	Form success message (same value as dark theme)
 Error	#E4685D	Form validation & error message (same value as dark theme)

The four locked accent colours and both status colours are identical across themes — only backgrounds, surfaces, text and borders change. This keeps LANUX visually consistent when switching themes.

Quick developer reference

```
--bg --bg-alt --surface --surface-elevated
--text --text-muted --border --border-strong
--primary --primary-strong --primary-tint --primary-pale
--on-primary --icon-accent (color-mix: 55% primary, 45% text)
```

- Use the existing LANUX tokens — do not introduce unrelated colours.
- Keep the blue-grey identity; all accents derive from the four locked colours.
- Maintain readable contrast, especially muted text and borders.
- Support both :root (dark) and [data-theme="light"] — never hard-code a theme's value.
- Use #4CAF7D / #E4685D for success / error states in both themes.
